Job Portal & Recruitment Management System

Intern Project Task Sheet

DURATION	DIFFICULTY	DOMAIN
2 Weeks	**Intermediate**	**HR Tech**

Objective

Develop a Job Portal and Recruitment Management System that connects recruiters with job seekers. The platform should allow recruiters to post and manage job openings, candidates to apply and track applications, and admins to oversee the overall hiring pipeline.

Core Features

1	**Authentication & Roles** – User login and registration with role-based access (Admin, Recruiter, and Candidate roles). – Secure password reset and profile management.
2	**Job Posting Management** – Recruiters can create, edit, and close job postings with details: Title, Description, Skills, Location, and Salary Range. – Candidates can browse and filter jobs by category, location, and experience level.
3	**Application Tracking** – Candidates can apply to jobs and upload resumes. – Recruiters can review applications and update status (Applied, Shortlisted, Interview, Rejected, Hired). – Automated email notifications on application status changes.
4	**Search & Filters** – Full-text search for jobs and candidate profiles. – Advanced filters for skills, experience, and job type (Full-time/Part-time/Remote).
5	**Dashboard & Analytics** – Recruiter dashboard showing active postings, total applicants, and shortlisted candidates. – Admin dashboard with platform-wide statistics: total users, jobs posted, and successful hires.

Tech Stack

BACKEND	FRONTEND	DATABASE	DEPLOYMENT
Django Django Rest Framework (DRF)	React.js Axios React Router	PostgreSQL	Docker docker-compose

Deliverables

✓ Backend APIs for job postings, applications, and status-update notification workflows.

✓ Frontend with forms for posting jobs, applying to jobs, and tracking application status.

✓ Recruiter and Admin dashboards with key hiring metrics.

✓ PostgreSQL database schema for the recruitment management system.

✓ Deployment setup using Docker with Dockerfiles and docker-compose.

Evaluation Criteria

- Code quality, structure, and adherence to best practices.
- Functional completeness against the listed features.
- UI/UX clarity and responsiveness across devices.
- Proper API documentation and Git commit hygiene.
- On-time submission as per the assigned timeline.
